

# HYDROSCAND TOOTEKATALOOG 2010 ADAPTERID

## ADAPTERID

## TOOTEGRUPP 700

Hydroscand pakub väga laias valikus adaptoreid (ühendusliitmikuid) erinevateks otstarveteks:

\*ühendused suure - ja väiksemõõtmeliste keermete vahel;

\*suunatavad liitmikud;

\*liitmikud voolikute ja torude ühendamiseks klappide, pumpade ja silindritega;

\*üleminekud ühelt keermetüübilt teisele;

\*lābiviikühendused voolikutele ja torudele;

\*erinevad kolmikühendused;

\*korgid torudele, voolikutele ja keermestatud avadele.

Hydroscandi adapterid on toodetud süsinikterasest mis vastab hüdraulikas nõutud tingimustele. Pinnatöötluks Cr<sup>6</sup> vaba galvaniseerimine, mis on keskkonnasõbralik ja ohutu tervisele.

Kui tegemist on kõrgete survetega proovige vältida R- ja NPTF koonuskeermeid. Neid on raske tihendada ning võivad puruneda liialt tugevalt võtmega pingutades.

## Tehniline informatsioon

**Materjal:** Teras

BS 970 230Mo7Pb

DIN 1.0718

SIS 1914-04

**Pinnatöötlus:**

Galvaniseeritud Fe/Zn 8 P1T

**Töötemperatuurid:**

-40°C - +155°C

**JIC 37° LIITMIKUD**  
**TOOTEGRUPP 760**

JIC 37° ühendused annavad hästi tihendatud ühenduse ka väga nõudlikes süsteemides.

Ühendus koosneb kolmest osast: liitmik, mutter ja tugihülss. Koos annavad nad 74° koonusega ühenduse. Ühendust nimetatakse JIC/SAE 37° ning see on vastavuses standardiga SAE J514/ISO 8434-2.

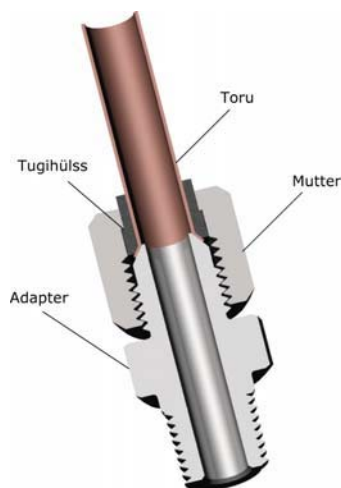

Tihendus saavutatakse nii, et valtsitud toruots pressitakse kahe koonilise pinna, liitmiku ja tugihülssi vahele.

Tugihülssi ülesandeks on takistada mutri lõikumist toruga ning torukoonuse toetamine. Tugihülss takistab toru pöörlemist mutri pingutamisel ning suunab toru liitmiku suhtes õigesti asendisse.

Liitmikku on võimalik kinni-lahti ühendada rohkem kui üks kord ilma ühendust kahjustamata.

Vahetades tugihülssi on võimalik sama ühendust kasutada nii meeter- kui ka tollmõõdus torudega.

**ORFS LIITMIKUD**  
**TOOTEGRUPP 770**

\*Hydroscandi ORFS liitmikud on vastavuses standarditega SAE J1453 ja ISO 8434-3.

\*Liitmikud on mõeldud survetele kuni 40 MPa, turvafaktoriga 4:1. Ühendused on vastupidavad vibratsioonidele ja rõhuimpulssidele.

\*Tihendus toru ja liitmiku vahel on tagatud O-rõngaga.

\*Liitmikuid on võimalik kinni-lahti ühendada mitmeid kordi ilma, et kvaliteet kannataks. Vahetust vajab vaid O-rõngas.

\*Võrreldes teist tüüpi liitmikega on ORFS liitmike väga raske „üle keerata“. See teeb korrektse montaaži lihtsaks ka väljaõppeta töölisele.

\*Liitmikul tugihülssi vahetades on võimalik ORFS liitmike kasutada nii meeter- kui tollmõõdus torudega.
